Little but brave

1

THE LAND BEFORE TIME

Paleontology is the science that studies fossils to understand evolution in our planet. Some of the evidence is found in fossils that once were dinosaurs. Pretend you are a paleontologist, who has found skulls and need to identify them. Which dinosaurs do they represent? The only clue is that these skulls are from two type of dinosaurs in the film. The main characters are:

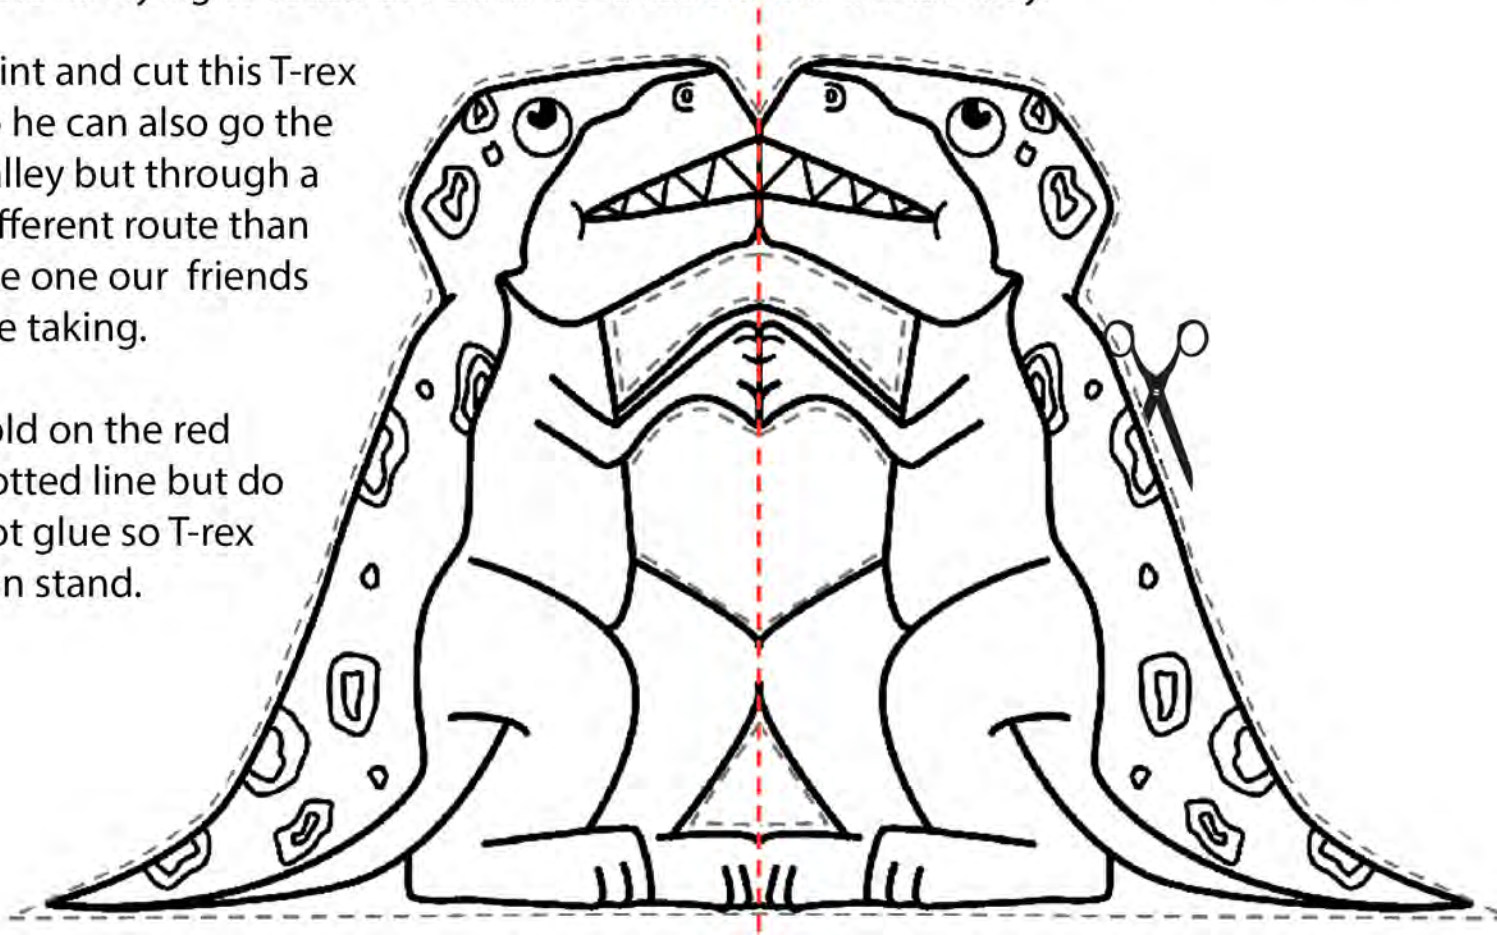

- Littlefoot (Apatosaurus)
- Cera (Triceratops)
- Ducky (Saurololphus)
- Petrie (Pteranodon)
- Spike (Stegosaurus)

2 All dinosaurs did not get along well. Some were prey and others were predators. Sharptooth was a predator and was trying to eat the little dinosaurs. In the end, they were all trying to reach the same destination: the Great Valley.

Print and cut this T-rex so he can also go the valley but through a different route than the one our friends are taking.

Fold on the red dotted line but do not glue so T-rex can stand.

3

Let's help Littlefoot and his friends escape from Sharptooth and get to the Great Valley. Bring them to life by applying some color, cutting, and pasting them into the landscape below.
