THE RED TURTLE

After a terrible shipwreck, the main character in this animated film spends what seems to be months, even years, attempting to escape from the island he is stranded on. A bamboo forest provided him with the materials to build rafts. He builds many of them, but inevitably, they all fail to pick up sail succumbed to a mysterious thumping force from underneath that destroyed them while in the water. Pretend you are alone in an island and want to escape. You are to build a vessel and the only thing you know is that when something is in water, there are two forces acting on it: gravity (pulls object downward) and buoyant force (pushes object upward). Search these terms and write or draw the vessel you will build and type of materials found in your island.

Materials:

2

When our main character saw the red turtle that he believed destroyed his rafts, laying eggs on the nesting beach, he could not control his violent emotions and let go of his rage. Do you think he felt remorse afterward? Do you believe his life in the island was real or imagined? How are you able to control your emotions when you feel anger and frustration, even when you blame someone else? Write or draw your answer below.

WHAT is causing my anger?

WHY do I choose to react this way?

HOW do my emotions affect the people I care about?

3 Did you know that sea turtles always return to the beach they hatched from to lay their eggs? Color our red turtle below as you learn about her life cycle.
